CNC Machinist – Miller

Description

Seadub designs, manufactures and reverse engineers components for the yachting industry which includes race boats and Superyachts. We are a small family run business looking for a versatile individual with a keen eye for detail. Our day-to-day operations are short production runs and one-offs.

We are adding to our team and currently have a vacancy for a machinist to run our XYZ SMX3500 Prototrak CNC Mill.

This role involves programming (conversational), setting and operating with the Prototrak control. Due to the nature of the work that Seadub undertakes, experience of manual milling is essential.

The right candidate will be able to work under their own initiative after a period of settling in.

Experience of Fusion 360 a bonus but not essential.

This is a very interesting role for the right person.

Please email your CV to info@seadub.co.uk or use the Apply Now button at the bottom of this page.
